**(54) PREVENTING METHOD FOR GENERATION
OF HYDROGEN SULFIDE OCCURRING IN
MICROBES**

(57) Abstract:

PURPOSE: To prevent the corrosion of waste water treatment devices, methane fermentation tanks, etc. and the generation of malodors by allowing nitrite ions to exist in the living environments for microbes such as in the bottom water of the waste water treating devices

using activated sludge or active carbon, and oil tanks.

CONSTITUTION: Nitrite ions such as sodium nitrite, potassium nitrite, calcium nitrite or the like are allowed to exist at $\geq 50\text{ppm}$ in the living environments for microbes such as the bottom water of waste water treatment tanks using activated sludge or active carbon, and oil tanks, methane fermentation tanks, polluted river, water soluble lubricants, or the like.
